1. System requirements

It is recommended to use the fully tested and certified platforms listed on this page. However, customers who are operating on other platforms or using untested configurations will be supported until we confirm that the root cause is related to an uncertified platform or configuration. Issues that can be reproduced on the certified platforms will be prioritized and fixed according to standard defect-handling policies. For more information about support policies, see [Support policies](#). For more information about installation or hardware requirements, see the [Install and upgrade guide for Linux](#) or [Install and upgrade guide for Windows](#).

* **Operating System Hotfixes:** Before installing OpenText Identity Manager, it is recommended that you apply the latest operating system patches according to the manufacturer's automated update facility.

* **Operating System (supported):** The latest versions of service packs for the certified operating systems are supported.

** **Lotus Notes Client** is only supported on the workstation platforms. A Remote Loader running on Windows 10 (64-bit) is only supported for the Lotus Notes driver integration. In normal OpenText Identity Manager installations, Remote Loader is supported only on server platforms.

Note

- OpenText Identity Manager components (Identity Vault, Identity Manager engine, Identity Manager drivers and Remote Loader, Designer, Identity Applications, and Identity Reporting) can be deployed as services on Amazon Web Services (AWS) EC2 and Microsoft Azure. For more information, see [Deploying OpenText Identity Manager on AWS EC2](#) in the [Install and upgrade guide for Linux](#) or [Deploying OpenText Identity Manager on Microsoft Azure](#) in the [Install and upgrade guide for Windows](#).
- Deployment of Sentinel Log Management is not supported on the cloud.

1.2. Virtual environments

VMWare ESXi 6.7, 7.0, and later	Yes	Yes	Yes	Yes	Yes	Yes
Hyper-V Server 2012 R2	Yes	Yes	Yes	Yes	Yes	

Virtualization System (supported): OpenText Identity Manager is supported on enterprise-class virtualization systems that provide official support for the operating systems where OpenText products are running. As long as the vendors of the virtualization systems officially support these operating systems, OpenText will support the entire OpenText Identity Manager stack on them.

1.3. Hardware and software requirements

1.8. System requirements for OpenText Identity Manager drivers

Note

OpenText Identity Manager 24.4 (and later) no longer supports a 32-bit version of the Remote Loader. As a result, it is incompatible with the Lotus Notes driver for Lotus Domino versions 12.0.1 (32-bit) and earlier, which require a 32-bit Remote Loader. However, you can use Lotus Domino 12.0.2 (64-bit) and later with the Lotus Notes driver on a 64-bit Remote Loader.
