OpenText™ Identity Manager is a comprehensive identity management suite. It provides an intelligent identity framework that leverages your existing IT assets and new computing models like Software as a Service (SaaS) by reducing cost and ensuring compliance across physical, virtual, and cloud environments. With this solution, you can ensure that your business has the most current user identity information. You can retain control at the enterprise level by managing, provisioning, and de-provisioning identities within the firewall and extending to the cloud. Through streamlined user administration and processes, OpenText Identity Manager helps organizations reduce management costs, increase productivity and security, and comply with government regulations.

The suite includes integration modules for several common customer systems, such as OpenText™ eDirectory, Microsoft Active Directory, LDAP v3 Directories, OpenText™ GroupWise, and Lotus Notes. Other integration modules are included but require a separate purchase to activate them.
